The MAILING DATE of this communication appears on the cover sheet with the correspondence address Period for Reply					
A SHORTENED STATUTORY PERIOD FOR REPLY IS SET TO EXPIRE 3 MONTH(S) FROM THE MAILING DATE OF THIS COMMUNICATION. - Extensions of time may be available under the provisions of 37 CFR 1.136(a). In no event, however, may a reply be timely filed after SIX (6) MONTHS from the mailing date of this communication. - If the period for reply specified above is less than thirty (30) days, a reply within the statutory minimum of thirty (30) days will be considered timely. - If NO period for reply is specified above, the maximum statutory period will apply and will expire SIX (6) MONTHS from the mailing date of this communication. - Failure to reply within the set or extended period for reply will, by statute, cause the application to become ABANDONED (35 U.S.C. § 133). Any reply received by the Office later than three months after the mailing date of this communication, even if timely filed, may reduce any earned patent term adjustment. See 37 CFR 1.704(b).

DETAILED ACTION

Claim Rejections - 35 USC § 102

1. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless -

- (b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.
- (e) the invention was described in (1) an application for patent, published under section 122(b), by another filed in the United States before the invention by the applicant for patent or (2) a patent granted on an application for patent by another filed in the United States before the invention by the applicant for patent, except that an international application filed under the treaty defined in section 351(a) shall have the effects for purposes of this subsection of an application filed in the United States only if the international application designated the United States and was published under Article 21(2) of such treaty in the English language.
- 2. Claim 9 is rejected under 35 U.S.C. 102(b) as being anticipated by Dunlap (5,124,807).

Regarding claim 9, Dunlap discloses an automatic gain controller equalizing a level of a frequency modulated video signal (112, fig. 6), the frequency modulated video signal having luminance and color components, the frequency modulated video signal being recorded on a recording medium; a limiter preventing a level or luminance components of the frequency modulated signal output from the automatic gain controller from exceeding a predetermined value (124); a recording equalizer equalizing an output of the limiter in accordance with the characteristics of the recording medium (126); a color low pass filter filtering and transmitting the color component of the frequency modulated video signal output from the automatic gain controller (112); and a mixer combining the luminance component output from the recording equalizer with the color component output from the color low pass filter (130). Dunlap further discloses that the

Art Unit: 2616

automatic gain controller instantaneously raises a gain of the inputted frequency modulated video signal when the inputted frequency modulated video signal is approved and varies to maintain the output of the gain controller at a given signal level (col. 10, lines 1-43).

In remark applicant argues that Dunlap does not teach that the automatic gain controller raises a gain of the inputted frequency modulated video signal when the inputted frequency modulated video signal is approved. In response the examiner disagrees. It is noted that Dunlap teaches that gain of the automatic gain controller is varied in response to the changing of the average level of the input frequency modulated video signal to maintain the level of the out signal of the automatic gain controller at given level. It is clear that Dunlap teaches the gain is instantaneously rising when the frequency-modulated signal is approved (is input to the gain controller) to keep the level of the output of the automatic gain controller at a given level. When the average level of the input signal is lowering, automatic gain controller raises the gain to maintain the level of the output of the gain controller to be constant.

Allowable Subject Matter

3. Claims 1-8 and 10-27 are allowed.

Conclusion

Application/Control Number: 09/605,414 Page 4

Art Unit: 2616

4. **THIS ACTION IS MADE FINAL.** Applicant is reminded of the extension of time policy as set forth in 37 CFR 1.136(a).

A shortened statutory period for reply to this final action is set to expire THREE MONTHS from the mailing date of this action. In the event a first reply is filed within TWO MONTHS of the mailing date of this final action and the advisory action is not mailed until after the end of the THREE-MONTH shortened statutory period, then the shortened statutory period will expire on the date the advisory action is mailed, and any extension fee pursuant to 37 CFR 1.136(a) will be calculated from the mailing date of the advisory action. In no event, however, will the statutory period for reply expire later than SIX MONTHS from the mailing date of this final action.

5. Any inquiry concerning this communication or earlier communications from the examiner should be directed to HUY T NGUYEN whose telephone number is (703) 305-4775. The examiner can normally be reached on 8:30AM -6:00PM.

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Andrew Faile can be reached on (703) 305-4380. The fax phone number for the organization where this application or proceeding is assigned is 703-872-9306.
